#### Appropriate engineering controls

**Engineering measures to reduce exposure:** Ensure adequate ventilation. Use process enclosures,

local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants

below the exposure limit.

#### Individual protection measures, such as personal protective equipment

# **Personal Protective Equipment**

**Eye protection:** Safety glasses with side-shields.

**Skin and body protection:** Chemical resistant apron

Gloves

Long sleeved clothing

**Respiratory protection:** Effective dust mask. Use a dust respirator under conditions where exposure to

the substance is apparent (e.g. generation of high concentration of dust (dust clouds), inadequate ventilation, development of respiratory tract irritation), and engineering controls are not feasible. Be sure to use an approved/certified

respirator or equivalent.

**Hygiene measures:** Avoid contact with skin, eyes and clothing. Wash hands before breaks and

immediately after handling the product. When using, do not eat, drink or smoke.

**Symptoms** 

Skin Contact: May cause skin irritation.

Eye Contact: May cause eye irritation.

**Inhalation** May cause irritation of respiratory tract.

**Ingestion** Low hazard for usual industrial handling. Magnesium salts are absorbed very

slowly from the gastrointestinal tract, and normally can be tolerated orally in fairly

large amounts with no significant accumulation of magnesium, except in

individuals with kidney dysfunction. Symptoms reported from magnesium chloride overdose include diarrhea, loss of appetite, hypotension, cardiac arrhythmias, respiratory depression, neuromuscular impairment, effects on behavior/central nervous system (depression, somnolence, excitement), loss of reflexes, and death

in respiratory arrest.

**Aspiration hazard** No information available.

Delayed and immediate effects as well as chronic effects from short and long-term exposure

**Chronic Toxicity** Prologned or repeated ingestion may have an effect on spleen, pancreas

(hypoglyemia), liver, the kidneys, and effects on calcium and potassium levels in the blood based on animal data. Note: If used under conditions generating fumes, there is a risk of developing metal fume fever (a flu-like condition) if the fumes are inhaled. Symptoms of metal fume fever are chills, fever, labored breathing, and

aches and pains which generally develop within a few hours after exposure, and

subsides within 24 to 48hours.
